Figure 1 consists of 12 bar charts, labeled (a) through (l), each representing a different demographic or psychosocial variable. The x-axis for all charts represents age groups, typically divided into five categories: 18-24, 25-34, 35-44, 45-54, and 55+. The y-axis represents the percentage of the total sample, ranging from 0% to 100%. Each chart contains five bars, one for each age group, showing the distribution of the variable across these groups. The variables are: (a) Age, (b) Sex, (c) Marital Status, (d) Education, (e) Employment, (f) Income, (g) Religion, (h) Ethnicity, (i) Health Status, (j) Living Arrangements, (k) Social Network, and (l) Life Satisfaction. The charts illustrate how the prevalence of various characteristics changes with age.

Figure 1 consists of 12 bar charts, labeled (a) through (l), arranged in a 6x2 grid. Each chart displays the percentage of total catch for a specific fish species in the Chesapeake Bay. The y-axis for all charts is 'Percentage of total catch' with a scale from 0 to 100. The x-axis represents different months or periods. The species names are listed on the left of each chart. The data shows seasonal variations in the catch percentages for each species.

- (a) *Menidia menidia*: Shows a peak in catch percentage around month 4.
- (b) *Merluccius merluccius*: Shows a peak in catch percentage around month 6.
- (c) *Paralichthys lethostigma*: Shows a peak in catch percentage around month 8.
- (d) *Stenotomus chrysops*: Shows a peak in catch percentage around month 10.
- (e) *Stenotomus chrysops*: Shows a peak in catch percentage around month 12.
- (f) *Stenotomus chrysops*: Shows a peak in catch percentage around month 14.
- (g) *Stenotomus chrysops*: Shows a peak in catch percentage around month 16.
